Aphids, Fungus Gnats

*Information to be used as guidelines only, crop times, grow habit will vary depending location, climate, time of year and environmental conditions

Picture above Grow Schedule-Colorado 2022-2023

Stik-Wk 32, Transplant Wk-40 (pinched 102 liner/6 plugs per pot in Picture), Cool wk 2, Warm week 10, Flower wk 17
(Note grown in hoop house, hanging flowered 2 weeks before the plants on the ground due to warmer temperatures)

General Comments

Apply preventative Fungicide drench & sprays
Keep plants on dryer side for improved finish size and flower cut
keep foliage dry to prevent fungal diseases
Full sun necessary for proper bloom set

PGR Suggestions

Summagic 4-6 PPM
B-Nine 1500-2500 PPM
